## 1 Generalized Weakening

Let  $\eta$  be a variable renaming. Then,

$$\frac{\Gamma\subseteq\Gamma'\qquad\Gamma\vdash\varphi}{\Gamma'\left[\eta\right]\vdash\varphi\left[\eta\right]}$$

## **1.1** ∀-case

- (1)  $y \notin FV(\Gamma)$
- (2)  $y \notin FV((\forall x) \varphi)$
- (3)  $\Gamma \vdash \varphi [x := y]$
- (4)  $\Gamma \subset \Gamma'$
- (G)  $\Gamma'[\eta] \vdash (\forall x\varphi)[\eta]$

*Proof.* Let z be a fresh variable. Since  $\Gamma[y:=z] \subseteq \Gamma'[y:=z]$ ,

$$\begin{split} &\Gamma'\left[\eta\right] \vdash (\forall x\varphi)\left[\eta\right] \\ &\longleftarrow \Gamma'\left[\eta\right] \vdash \forall x\left(\varphi\left[\eta\right]\right) \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[z:=\eta\left(y\right);\eta\right] \vdash \forall x\left(\varphi\left[\eta\right]\right) \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[z:=\eta\left(y\right);\eta\right] \vdash \forall x\left(\varphi\left[z:=\eta\left(y\right);\eta\right]\right) \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[z:=\eta\left(y\right);\eta\right]\left[x:=z\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[y:=z;z:=\eta\left(y\right);\eta\right]\left[x:=z\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[y:=z;z:=\eta\left(y\right);\eta\right]\left[x:=y\left[y:=z;z:=\eta\left(y\right);\eta\right]\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[x:=y\right]\left[y:=z;z:=\eta\left(y\right);\eta\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[y:=z;z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[x:=y\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[y:=z;z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[x:=y\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]\left[y:=z;z:=\eta\left(y\right);\eta\right] \vdash \varphi\left[x:=y\right] \\ &\longleftarrow \Gamma'\left[y:=z\right] \\ &\longleftarrow \Gamma'\left[y:=z\right]$$
